Art Unit: 2834

Restriction to one of the following inventions is required under 35 U.S.C. 121:

, drawn to a surface acoustic wave device, classified in class 310 subclass 313D

II. Claim 11-13 drawn to branching filter classified in class 333 subclass 150

The inventions are distinct, each from the other because:

Inventions group I and group II are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because a branching filter can use many types of known surface acoustic wave elements-note for example the prior art indicated on pages1-3 of applicants specification.

The subcombination has separate utility such as surface acoustic wave resonator or delay line.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
